

# Hands-on Infrastructure Automation with Terraform on AWS

Alexander Savchuk

# Your first deployment with Terraform

Section 2

Set up *AWS* provider

# Scenario

Implement Infrastructure as Code in an organisation.

But where do we start?

# Why S3?

- simple to deploy
- self-contained
- free to create
- will be used in future modules

Demo

# Provider

Terraform object that is responsible for managing the lifecycle of a resource: create, read, update, and delete operations (CRUD).

# Deploy an S3 bucket into AWS
